# Giridhar Nallappa Jayakar

## Experience Summary

Associate has more than to 7 years of experience in Information Technology with hands on experience in application design, development and implementation of business process management solutions for clients in the Healthcare, Banking and Insurance industries. As part of his assignments, he has been in Requirement Analysis, Application Maintenance, Functional Studies, Quality Reviews and Testing. He has worked on projects for clients such as AIG, Standard and Poors, Travelers, Express Scripts, Ace Insurance UK.

## Education and Certifications

| Title of the Degree with Branch | College/University | Year of Passing |
|---|---|---|
| Bachelor of Engineering in Electronics and Communication. | Anna University, Chennai. | 2006. |

## Technical Skills

| | |
|---|---|
| **Hardware / Platforms** | Windows 98/XP/2000. |
| **Technology** | Pega PRPC (V6.2 and lower) |
| **Programming Languages** | Java |
| **Databases** | MS-Access, Oracle 9i, SQL Server 2005. |
| **Scripting Languages** | JavaScript, HTML. |
| **Tools & Utilities** | MS Visio, Toad, PSPad, EditPlus |

## Certifications

- Pega Certified PRPC Senior System Architect V5.5
- Pega Certified CPM Architect (CCA)
- Pega Certified System Architect

## Visa Details

- US B1 valid till May 2017
- US H1B valid till Jan 2015

## Contact Details

Mobile # : 201-660-0711
Address: 72A Dafrack Drive, Lake Hiawatha, NJ 07034

## Relevant Project Experience

**Organization: Satyam Computer Services Ltd., (Oct 2006 to Jun 2009)**

**Project #1**

| | |
|---|---|
| *Title* | **AIG – Australasia**. |
| *Client* | American International Group, Australia |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V4.2 SP4 |
| *Team Size* | 10 |
| *Role* | Offshore Team Member |
| *Period* | Dec 2006 – Oct 2007 |

## Project Description

The objective of this project is to upgrade and implement the existing application in Europe for Australia and New Zealand. This involves three major flows viz the outer wrapper, product wrapper and policy wrapper. The outer wrapper involves producer, client searches and the product selection. Once product is selected premium is calculated using Product configurator based on the rating questionnaire. Then quote is generated and documents are sent for printing, using docucorp integration. The product and policy searches are using Estart tool, which also generates the submission number. Basically docucorp and Estart integrations are involved in this project. The concept of localization is also in focus for this project as this is deployed among two countries.

## Responsibilities

- Responsible for Business application development for the SBS product
- Design understanding and Development
- Create flows, flow actions, activities, sections
- Creating xml rules for passing values to docucorp for document generation
- Create database scripts to load data into the external DB
- Create rules for the Business Process
- Unit testing the application
- Creation of RAPP/builds to be deployed to QA, UAT and Prod
- Setting up the users both in PRPC and in the database

## Project #2

| | |
|---|---|
| *Title* | **AIG – Australasia Transition** |
| *Client* | American International Group, Australia |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V4.2 SP4 |
| *Team Size* | 10 |
| *Role* | Onsite Module Lead |
| *Period* | Nov 2007 – Jun 2008 |

## Project Description

The objective of this project is to support and upgrade the existing application while transitioning the knowledge to another support team.

## Responsibilities

- Analyzing the Change Requests and estimating them
- Proposing better solutions for effective use of the application
- Analyzing the defect and fixing it
- Loading of new data into the database
- Editing the flow based on the Business requirements
- Executing data patches to fix any defects in an active transaction
- Testing - unit testing & integration testing, documenting the same
- Documenting the issues/defects encountered
- Knowledge transfer of the existing process to the support team

## Project #3

| | |
|---|---|
| *Title* | **AIG – Australasia Migration from V4 to V5** |
| *Client* | American International Group, Australia |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V4.2 SP4, V5.3 SP2 |
| *Team Size* | 6 |
| *Role* | Onsite Module Lead |
| *Period* | Jun 2008 – Jul 2008 |

## Project Description

The Objective of this project is to migrate the existing application in PRPC V4.2 to PRPC V5.3, this involved identifying the rules and rulesets, skimming of the rules, exporting them from the V4 and importing them to the new environment.

## Responsibilities

- Identifying the rules and ruleset versions to be moved
- Skimming the rules to a higher version
- Exporting the rules from source and deploying them on the target system
- Access group modification on the target system
- Unit Testing of the target system to be in sync with the source
- Fixing defects/issues arising due to the migration

## Project #4

| | |
|---|---|
| *Title* | **AIG – Australasia Renewal** |
| *Client* | American International Group, Australia |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V5.3 SP2 |
| *Team Size* | 15 |
| *Role* | Onsite Module Lead |
| *Period* | Jul 2008– Dec 2008 |

## Project Description

The main objective of the project is to design and develop an application to renew policies that were booked through New Business. Since the New Business was processed by different systems it was necessary to retrieve the transactions from different databases and process them through this application. Every policy is retrieved and routed to either an Underwriter or a Customer Support User based on some streaming rules. The access for processing the case was controlled by user roles and privileges. A Work Basket management dashboard was created to effectively manage the work between the users.

## Responsibilities

- Analysis of the specifications provided by the clients
- Design understanding and Development
- Creation of flows and flow actions for the Renewal process
- Creation of queries to retrieve data from different databases
- Creating activities for applying the Business logic
- Creating new functions which can be used in sections and activities
- Creating XML rules to pass values to docucorp for document generations
- Testing - unit testing & integration testing, documenting the same
- Responsible for overseeing the Quality procedures related to the project

## Project #5

| | |
|---|---|
| *Title* | **AIG Comet Phase I** |

| | |
|---|---|
| *Client* | American International Group, UK |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V5.2 SP2 |
| *Team Size* | 8 |
| *Role* | Offshore Team Member |
| *Period* | Jan 2009 – Apr 2009 |

### Project Description

The objective of this application is to support a single point of entry for all new business submissions spanning across all lines of business and across UK / European region. The application will also support differentiation of submissions on the basis of product and the complexity of submission and routing

### Responsibilities

- Analyzing the Change Requests and estimating them
- Analyzing the defect and fixing it on time
- Editing the flow based on the Business requirements
- Executing data patches to fix any defects in an active transaction
- Testing - unit testing & integration testing, documenting the same
- Documenting the issues/defects encountered

## Project #6

| | |
|---|---|
| *Title* | **Rating Process Management** |
| *Client* | Standard and Poors, USA |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V5.1 |
| *Team Size* | 17 |
| *Role* | Team Member |
| *Period* | May 2009 – Jun 2009 |

## Project Description

The objective of this project is to build a workflow that facilitates the efficient capture of data, creation/storage of documents and surveillance associated with the ratings process. The process facilitates Automated rating process including New Deal, Committee Process, Ratings Release, Analytical Triggers, Surveillance and Billing.

## Responsibilities

- Resolving defects raised in the Records Management module
- Analyzing the changes requests and providing solutions
- Coordinating with the onsite team
- Testing - unit testing & integration testing
- Documenting the issues, solutions for tracking.

## Organization: Cognizant Technology Solutions (July 2009 till date)

**Project #7**

| | |
|---|---|
| *Title* | **GSO Combined Tool** |
| *Client* | Travelers Insurance, USA |
| *Operating System* | Windows XP |
| *Tools* | Rules Process Commander V5.5 SP1 |
| *Team Size* | 6 |
| *Role* | Offshore Senior Systems Architect |
| *Period* | Jul 2009 – Apr 2010 |

## Project Description

The Objective of this project is to design and develop a tool which will be used to maintain and manage the ITO and BPO vendors. This requires gathering the requirements of various processes and develop them using PRPC. Since the system will interact with various other existing systems to process information, DB and SOAP integrations are in scope for this project.

## Responsibilities

- Preparing the High Level Design document
- Creating mock up screens
- Developing POC's for certain complex requirements

- Identifying the rules to be used while development
- Preparing Test Cases for individual modules.

## Project #8

| | |
|---|---|
| *Title* | **Centralized Brokerage system** |
| *Client* | ACE Global markets, UK |
| *Tools* | Pega Rules Process Commander V5.2 |
| *Team Size* | 4 |
| *Role* | Onsite Technical Lead |
| *Period* | May 2010 – Dec 2010 |

### Project Description

The primary objective of this project is to integrate the existing document processing system to the Lloyds gateway, which is the centralized channel through which insurance brokers perform their transaction. Pega's integration capabilities were leveraged by using SOAP services which takes in the request from the gateway, processes the information and sends a response back to the caller. ACORD format was used as the standard for information exchange.

### Responsibilities

Onsite Development Lead responsible for designing and developing the integration components and coordinating with the offshore team and the business.

- Involved in requirement discussions with the business and design reviews with the technology architects.
- Designed and developed the SOAP services and the class structure to be used for the integration component.
- Responsible for code migration from development till production.
- Worked with the infrastructure teams on environment setup.
- Created database views in oracle database to use the result-set on a list view to accomplish the reporting requirements.
- Trained and coached offshore resources on the application and guided them in their development tasks.

## Project #9

| | |
|---|---|
| *Title* | **LBG Insurance re-platform** |
| *Client* | Lloyds Banking Group, UK |
| *Tools* | Rules Process Commander V6.1 SP2 |
| *Team Size* | 6 |
| *Role* | Onsite Senior Systems Architect |
| *Period* | Jan 2011 to June 2011 |

### Project Description

This project is the re-platform and re- engineering of then existing Scottish widows policy administration applications into Pega based workflow system. The Lloyds banking group acquired Scottish Widows, an insurance major in Scotland. Pega's workflow and rule management system was chosen to integrate various systems between the two companies and re-engineer the existing applications within Scottish Widows.

### Responsibilities

Senior developer responsible for designing the class structure and workflows and building user interfaces in Pega.

- Lead a team of three to interact with the business to harvest the existing application process and capture these as requirements using the DCO tool in Pega.
- Worked with the integration architecture team to build SOAP connectors to integrate with other systems within LBG.
- Developed the UI skin based on specifications provided by the company to match other applications within LBG.
- Created smart reports using the list view and summary view rules to provide process and application metrics.

## Project #10

| | |
|---|---|
| *Title* | **Coverage Review – C360** |
| *Client* | Express Scripts, USA |
| *Tools* | Rules Process Commander V6.1 SP2 |
| *Team Size* | 40 |
| *Role* | Onsite Lead System Architect |
| *Period* | Jul 2011 – Dec 2013 |

## Project Description

Coverage Review-C360 is the re-platform of the Coverage Management Work Station (CMWS), a legacy system based on C++/Broadvision into a flow based Pega application so that additional external client commitments can leverage the existing application platform. Pega's case management flows outline and walk through the process of creating a case, making a determination and finalizing the outcome for the Prior authorization process.

## Responsibilities

Onsite technical lead responsible for design, development and support of the application and coordination with offshore and the business teams.

- Involved in the design and development of this application, which includes flow design, customization of the framework flows, integration for role based user authorization, smart agent to control the agent execution in clustered environment.
- Mastered the prior authorization business functionality.
- Lead the development of Finalize module, which is an essential component of this application.
- Lead the design and development of auto case build process which takes care of building a case end to end automatically without any manual intervention.
- Designed and developed services, which will be hosted by the application for external systems to request for auto case build.
- Monitoring application performance, analyzing alerts and logs using smart tools like OPNET, WILY, PLA and fixing defects that come up in production which has a base of little less than a thousand users.
