Project Experience:

Project Title: Error Workflow System (EWS) and Pega CoE Oct-12-till date
Client: Highmark Inc., Pittsburgh
Technical Lead

The purpose of this project is to support the processing of Highmark Spending Account data via integration with the Acclaris System by developing a workflow for handling errors encountered in the file transfer process between internal systems and Acclaris. This error handling solution will address the need for appropriate audit tracking and expedient resolution of errors.

Responsibilities

- Involved in Requirement analysis
- Preparation of Technical Design Approach for the individual functionalities
- Unit testing of the modules developed
- Code review for the individual modules
- Release management and deployment of the code to production
- Provided guidance in fixing some of the issues in the current application
- Analyzing the existing system and continuously providing the suggestion to improve the application performance and architectural Design
- As part of CoE team also involved in code review for other Pega applications.

- Involved in resolving performance issues by working on AES alerts etc for other applications.
- Suggesting UI improvements.
- Coding reusable components like Security Framework, LDAP Integration etc.

Project Title: Pre Foreclosure Review Feb, 12-Aug, 12
Client: JP Morgan Chase, Dallas
Module Lead

As part of this project, the internal process before foreclosing a mortgage is streamlined by analyzing the Gain/Loss of the mortgage foreclosure and also foreclosure review of each loan. The goal is to ensure JPMorgan Chase has a tool that provides a holistic view of all inquiries, submissions and the status of all active requests, while providing an individual case for each mortgage foreclosure and tracking that the loan meets all the pre requisites of the foreclosure process.

Role and Responsibilities

- Involved in Requirement analysis
- Preparation of Technical Design Approach for the individual functionalities
- Unit testing of the modules developed
- Code review for the individual modules
- Coordinating with offshore on day to day tasks
- Release management and deployment of the code to production
- Resolving Peregrine Tickets

Project Title: Default Workflow Standardization Nov, 10-Aug, 12
Client: JP Morgan Chase, Hyderabad-India
Module Lead

As part of this project, the US Treasury Department announced a national modification program aimed at helping 3 to 4 million at-risk homeowners - both those in default and those who are at imminent risk of default - by reducing monthly payments to sustainable levels. The goal is to ensure JPMorgan Chase has a tool that provides a holistic view of all inquiries, submissions and the status of all active requests, while providing an individual case for each mortgage restructure and tracking that case to resolution.

Role and Responsibilities

- Requirement analysis
- Preparation of Technical Design Approach for the individual functionalities
- Involved in development since Release 6.0 of application
- Unit testing of the modules developed
- Performed PAL and DB analysis to analyze the overall performance of the system
- Involved in upgrade POC to 6.1
- Resolving Peregrine Tickets

Project Title: TD- WalletShare Phase-2 Aug, 10-Nov, 10
Client: TD Bank, Hyderabad-India
Senior Developer

T.D Bank N.A has embarked on an initiative to extend its current Ovation platform to provide new account opening service to its existing or prospective customer. The proposed implementation (Walletshare – Phase 2) would allow T.D N.A customers to open a new Checking/Saving/ Commercial Deposit and Money market accounts over phone through its call center. The account creation process is divided into components

1. Performed by CSR when on phone with customer
2. New functionalities to be built on Pega platform

Role and Responsibilities
