Ajay Gampa

Experience Summary

I have 6+ years of experience in the Information Technology and total experience is with Pega PRPC technology. As part of my assignments, I have been involved in Requirement Analysis, Functional Studies, Development, Quality Reviews, Unit Testing, Application Maintenance, Migration and Up-gradation. I have worked on projects for JPMC, Franklin Templeton, BOA, HSBC and Highmark. I have been involved in all stages of software lifecycle. I have the following experience:

- Involved in user requirements analysis, system analysis and design specification documents Participated in Inception, Elaboration, Construction and Transition phases
- Good communication with Customers to understand their Business Requirements
- Strong technical skills and team skills
- Other Technical Strengths – Java, HTML, JavaScript and OS concepts
- Understanding the business process and give the best possible automated implementation process for clients.
- Expertise in application development using PRPC and Smart Investigate Framework
- Good project co-ordination exposure and experience of working in onsite-offshore model
- Good experience working in financial domain, mortgage banking and healthcare
- Good Experience in requirement gathering and analysis
- Team player with ability to communicate effectively at all levels of the development process
- Good experience in Migrating and Upgrading applications to PRPC 6.1 & 6.2
- Participated in DCO sessions
- Good experience in Smart Investigate Framework and trained in CPM frameworks
- Participated in Project Assessments and providing estimates

Education Details

Title of the Degree with Branch	College/University	Year of Passing
Bachelor of Technology in Computer Science and Engineering	JNTU University, Hyderabad.	2007

Technical Skills

Hardware / Platforms	Windows XP/2000/NT/95/98
Technology	PEGA
Programming Languages	C, Java.
Databases	Oracle 9i
Scripting Languages	JavaScript, HTML.
BPM Tools	Pega Rules Process Commander V4.2, 5.x, V6.x

Frameworks

Smart investigate

Certifications

CSSA in PRPC 5.5

CSA in PRPC 5.1

CMBB

Relevant Project Experience

Company: Highmark Inc

Project - 1:

Title First Line of Work

Operating System	Windows XP
Tools	PRPC 6.1 SP2, Java, JSP, HTML, JavaScript
Team Size	20
Role	Team Lead
Period	Feb 2013 – Till Date
Client:	Highmark Inc

Project Description

Client and Product Enterprise System (Capes) for Front Office (4FO) will be the first round of modernizing the ICIS application's capabilities. The focus of C4FO is on client, group and product configuration features for sales and sales support users (Front Office). Although this functionality is being developed in a custom Java application, Pega is being used for the supporting workflow application. The workflow application will track work items for all tasks performed within the C4FO application. It will also allow for manual or systematic assignment of work. Workflow will also be used to interact with users of other systems that C4FO users may need information from during their work.

Role and Responsibilities

- Development lead for the application
- Release Management
- Involved in Business Discussions with Clients
- Involved in analyzing and fixing several SIT, UAT & Production Defects
- Requirement analysis, Design Documentation, Coding and Unit Testing
- Performed PAL and DB analysis to analyze the overall performance of the system
- Involved in DCO sessions, generating use cases and flow diagrams
- Mentoring new joiners
- PRPC trainings to new joiners
- Involved in Design and Code Reviews
- Implementation of various External Integrations
- Implementing BIX and Reporting Solution Framework
- Code Reviews Design Reviews

Company: Synechron Inc

Project – 2:

Title	DOJ PreFC
Operating System	Windows XP
Tools	PRPC 6.2, Java, JSP, HTML, JavaScript
Team Size	7
Role	Module Lead
Period	Jul 2012 – Till Date
Client:	BOA

Project Description

The existing workflow technologies have several shortcomings that continue to negatively impact Foreclosure operations. The DRAW tool does not meet the Bank's information security requirements, and there are concerns about scalability required to maintain and/or grow with the current business demands/processes across refer to foreclosure and postponements. The scope of this project is

replacing the DRAW application for the Foreclosure Referral Review (FRR) and Requested Postponement (FP) processes. The FRR team is responsible for pre-foreclosure compliance to determine that certain conditions have been met prior to referral of the loan.

Role and Responsibilities

- Development lead for the application
- Release management
- Involved in Business Discussions with Clients
- Involved in analyzing and fixing several SIT, UAT & Production Defects
- Requirement analysis, Design Documentation, Coding and Unit Testing
- Performed PAL and DB analysis to analyze the overall performance of the system
- Involved in DCO sessions, generating use cases and flow diagrams
- Mentoring new joiners
- PRPC trainings to new joiners
- Involved in Design and Code Reviews

Company: Cognizant Technology Solutions

Project – 3:

Title	Default Workflow Standardization
Operating System	Windows XP
Tools	PRPC 5.4, Java, JSP, HTML, JavaScript
Team Size	20
Role	Team Member/ Module Lead
Period	Nov 2010 – Till Date
Client:	JP Morgan Chase

Project Description

As part of this project, the US Treasury Department announced a national modification program aimed at helping 3 to 4 million at-risk homeowners - both those in default and those who are at imminent risk of default - by reducing monthly payments to sustainable levels. The goal is to ensure JPMorgan Chase has a tool that provides a holistic view of all inquiries, submissions and the status of all active requests, while providing an individual case for each mortgage restructure and tracking that case to resolution.

Role and Responsibilities

- Involved in development of Release 6.0, Default Workflow, OCC and SPOC releases of application
- Involved in several Point Releases
- Played Techno-Functional role for several modules/releases
- Involved in Business Discussions with Clients
- Involved in analyzing and fixing several Production Defects
- Requirement analysis, Design Documentation, Coding and Unit Testing

- Performed PAL and DB analysis to analyze the overall performance of the system
- Migrating and Up-grading the existing 5.4 application to 6.1
- Involved in DCO sessions, generating use cases and flow diagrams
- Mentoring new joiners
- PRPC trainings to new joiners
- Involved in Design and Code Reviews

Company: Cognizant Technology Solutions

Project – 4:

Title	FT – PegaWorks to PRPC
Operating System	Windows XP
Tools	PRPC 5.5, Java, JSP, HTML, JavaScript
Team Size	04
Role	Team Member
Period	Jun 2010 – Nov 2010
Client:	Franklin Templeton

Project Description

As a part of Franklin Templeton – Global Transfer Agency Pega works to PRPC migration all the components developed in Pega Works are considered and are mapped as corresponding PRPC requirements to be developed. All the Divisions for which different Investigation types defined are captured as various scenarios in a PRPC Work flow.

Role and Responsibilities

- Involved in Inception phase and Elaboration phase of the application.
- Analysis of requirements gathered.
- Use Case analysis.
- Development of Visio Flows.
- Creating UI screens for the flows

Company: HSBC Global Technology

Project – 5:

Title	Global Payment Investigation (GPI)
Operating System	Windows XP
Tools	PRPC 5.4, Java, JSP, HTML, JavaScript, Web Sphere, Oracle 9i
Framework	PRPC Smart Investigate
Team Size	04
Role	Team Member
Period	Sep 2009 – May 2010

Client: HSBC UK

Project Description

This is an automated investigation system for the payments in HSBC and line of business to find out what went wrong in the whole transaction and then figure out the problem. Global Payment Investigation is a framework Developed by HSBC as part of its customer support to resolve various kind of request raised by its customers regarding the payments they made. The requests can be of SWIFT messages and Manual case creation. This is built on top of Old GPI application, which was rolled out mainly for HK and UK. The new application has been rolled out to around 42 countries till date.

Role and Responsibilities

- Involved in On Boarding of 42 regions till date and involved in making Country Specific changes.
- Alert Log analysis.
- Unit testing of the system for all the On Boarding countries.
- Performed PAL and DB analysis to analyze the overall performance of the system.
- Preparing design documents, implementation plans and regular communication with client HSBC UK.

Company: HSBC Global Technology

Project – 6:

Title	Reference Implementation (RI)
Operating System	Windows XP
Tools	PRPC 5.5, Java, JSP, HTML, JavaScript, Web Sphere, Oracle 9i
Team Size	03
Role	Team Member
Period	Dec 2008 – Aug 2009
Client:	HSBC UK

Project Description

Trade Service Investigation application has been built as part of Reference Implementation project for HSBC. The Trade Services Investigations system (TSI) is a Web based Front End application for Business Users at the Trade Services Service Centre in Leicester. The system will provide an automated process for the logging and investigation of Trade queries raised by customers or other banks.

RI application is built to give the certification for newly introduced features in PRPC version 5.5 as part of Workflow COE

Role and Responsibilities

- Developed entire TSI application incorporating PRPC v5.5 new features.
- Fixing of bugs for achieving desired functionality.
- Unit tested the system for the intended functionality behavior with multiple test scenarios.
- Performed PAL and DB analysis to analyze the overall performance of the system.

- Migration of Application from 5.4 to 5.5.

Company: HSBC Global Technology

Project – 7:

Title	Global Investigation System Migration (GIS Migration)
Operating System	Windows XP
Tools	PRPC 5.4, Java, JSP, HTML, JavaScript, Web Sphere, Oracle 9i
Framework	PRPC Smart Investigate
Team Size	04
Role	Team Member
Period	Jul 2008 – Nov 2008
Client:	HSBC UK

Project Description

This is an automated investigation system for the payments in HSBC and line of business to find out what went wrong in the whole transaction and then figure out the problem. Global Payment Investigation is a framework Developed by HSBC as part of its customer support to resolve various kind of request raised by its customers regarding the payments they made. The requests can be of type's paper based, Telephonic and SWIFT messages. For Paper and telephonic a part of customer services are manually resolved and for SWIFT investigations they are automated by using parsing and MQ Listeners. Pega Smart Investigate is used for this framework.

Role and Responsibilities

- Migration of GPI from PRPC v4.2 sp1 to PRPC v5.4 sp1.
- Performed post-migration tasks.
- Unit tested the system for the intended functionality behavior with a couple of test scenarios.
- Participated in code-reviews for the code optimization to acquire high performance and quality of system by reducing the database calls and objects utilization unnecessarily.
- Performed PAL and DB analysis to analyze the overall performance of the system.
- Alert Log Analysis.

Company: HSBC Global Technology

Project – 8:

Title	Global Investigation System
Operating System	Windows XP
Tools	PRPC 4.2, Java, JSP, HTML, JavaScript, Web Sphere, Oracle 9i
Framework	PRPC Smart Investigate
Team Size	20
Role	Team Member
Period	Oct 2007 – Jun 2008

Client: HSBC UK

Project Description

This is an automated investigation system for the payments in HSBC and line of business to find out what went wrong in the whole transaction and then figure out the problem. Global Payment Investigation is a framework Developed by HSBC as part of its customer support to resolve various kind of request raised by its customers regarding the payments they made. The requests can be of type's paper based, Telephonic and SWIFT messages. For Paper and telephonic a part of customer services are manually resolved and for SWIFT investigations they are automated by using parsing and MQ Listeners. Pega Smart Investigate is used for this framework.

Role and Responsibilities

- Was part of GPI Interfaces team.
- Development of interface components like File Interface and MQ interface.
- Customized and developed the modules for SwiftBic Sepa and Fxrates based on the design documents.
- Unit tested the system for the intended functionality behavior with a couple of test scenarios.
