Manikandan.G

Professional Summary

- **11 years 2 months** of experience in component development and implementation utilizing client-server architecture and Internet/Intranet technologies.
- Around **2 years** of relevant experience in ***BPM Technical Architect*** - ***middleware***.
- Expertise in establishing all necessary Monitoring, Alerting and Reporting mechanisms to provide ***Performance Testing, Optimization, Outage Management, Root Cause Analysis, Capacity Planning and Run-time Event Notification services*** to BPM clients.
- Involved integration projects in ***IBM BPM Lombardi suite 7.5, IBM Integration Designer 7.5, Websphere Process Server*** version starts from 6.x Environment, used SAP, Siebel and Oracle App as Integration targets systems. ***Websphere BAM*** used for Process monitor and reporting.
- Hands on experience in ***Sonic MQ*** and ESB for Enterprise Integration, also used ***iWay Adapter*** for ***SAP integration***.
- Over six years, have been involved in various ***SOA***, ***ESB*** and ***Web Services*** related projects in J2EE environment.
- Handed ***Service enabling*** in Legacy System environment using ***EntireX Suite***.
- In Web Service stack, have a strong competency in ***SOAP, WSDL, UDDI, XML, XSD, Apache Axis and IBM SOAP Engine.***
- Very good team management & client facing experience and Strong analytical and problem solving skills.
- Expertise working in UNIX, LINUX and Sun Solaris platforms

Project Summary

BPM Consultant (Apr 13 – Present) ***MorganStanley SmithBarney (MSSB) NJ, USA***

Project Description

The Branch Workflow application aims to automate certain segments of the Morgan Stanley and Smith Barney Line of Business. It is a re-engineering initiative to enhance the current scanning process and automate its associated workflows. This effort would improve process efficiency and eliminate “paper” waste.

Contribution

- Done feasibility study and impact analysis of Artifact migration and Runtime migration methods for MSSB environment.
- Involved in migration roadmap preparing from IBM Websphere Process Server 6.2 to IBM BPM 7.5.
- Doing impact analysis of Performance Data warehouse and Process Server (Bus & DB) introduced as part of IBM BPM 7.5 migration plan in an application performance and topology aspect.
- In current infrastructure there are no alert mechanisms when message fails and pass on to FEM. Preparing a solution and architectural document which supports alerting mechanism.
- At present development team doesn’t have proper log tracing mechanism which helps them to analysis the bug, preparing a solution and architectural document to introducing a common logger mechanism which supports the development / application support team to trace the error points in efficient manner.
- In parallel doing infrastructure (Topology) study which helps the business to increase the transaction by adding additional branches.

Technology

IBM BPM Lombardi 7.5, WebSphere Application Server8.0, Synergy Version control, SOAP UI.

Technical Architect (Nov 11 – Mar 13) ***BHP Billiton, Perth, Western Australia***

Project Description

In BHPB Iron Ore 1SAP integration initiative, ICC is a seamless enterprise capability that will provide a consistent, predictable and repeatable approach in the delivery of integration, business intelligence and reporting services to 1SAP Program. These services will be operated on IBM stack.

ICC analyzes the requirement and selects the different projects. The integration projects selected are OSR PI, Component tracking, RSA, BPR, HR interfaces.

Contribution

- Single point of responsibility for the technical solution from an application and system perspective
- Coach the development team in understanding and developing of the technical architecture
- Assist in removing roadblocks on technical front -PoCs, code blocks etc.
- Prepare architectural documents and presentations, and resolve technical issues
- Provide technical support and technical quality control throughout all stages of the project
- Co-ordinate vendor services related to technology selection and implementation
- Establish and enforce compliance with coding guidelines using code reviews etc
- Create and proliferate templates for deliverables
- Establishment of Enterprise Architecture Framework & Methodology (TOGAF based)
- Ensuring that all the infrastructure and application monitoring tools available and/or necessary for the execution of performance testing, monitoring, support, and problem determination of BPM applications and environments are in place and operational.
- Ensuring that periodic and on-demand reporting are in place to provide sufficient visibility into application and environmental trending in support of capacity planning, cost management and optimization within the context of the entire hosting environment

Technology

WebSphere Enterprise Service Bus (v7), WebSphere Process Server (v7) & WebSphere Services Registry and Repository (v7), ArchiMate Modeling Tool & SOAP UI

Technical Architect (June 11 – Oct 11) ***TNPA, Durban, South Africa***

Project Description

IBM has been implemented B2B application at TNPA environment with WPS 6.1.2 version. This involved Websphere Portal, Websphere Process Server, Websphere MQ, DB2 and legacy systems like SAP and other external systems. In this environment there is major show stopper which degrade the complete system performance.

Contribution

- Understands the implemented system and identified the architecture flaw.
- Architecture analysis in BPM layer and fine tune the system.
- Identified and rectified the anti patterns used in BPM & ESB layer which helped to address the major show stopper that degrades the complete system performance.
- Review and recommendation of Architecture, Design and Monitoring solutions.
- Changes done at workflow level for future releases.
- Code changes in order to improve database efficiency.

Technology

WebSphere Enterprise Service Bus (v6.1.2), WebSphere Process Server (v6.1.2) and SOAP UI

BPM / SOA Consultant (Feb 11 – May 11) ***Nissan North America (NNA), Nashville, USA***

Project Description

Performed BPM consultant role at client location

Contribution

- Analyze and understands the existing deployment topology and identified the infrastructure flaw.
- Capacity planning for new AOG (Application Operation Group) which created in existing gold topology.
- Handled design and code review and identified anti patterns in BPEL and ESB.
- Provide technical advice and solutions to Nissan RTB on various infrastructure, application support, enhancements and maintenance issues. (Eg: New-infrastructure architecture blueprint)
- Development – provide expert opinion, best practices, workarounds on solution design and code developed. (Eg: SPARC code reviews, troubleshoot code & integration issues and provided fixes ,etc)

Technology

WebSphere Enterprise Service Bus (v6.2), WebSphere Process Server (v6.2) and SOAP UI

BPM / SOA Consultant (Jun 10 – Jan 11) ***MSSB Connect, NY, USA***

Project Description

Agent Desktop is a platform for application integration - accessing and updating information owned by various source systems and integrating with telephony infrastructure. The major focus on this initiation is case management workflow.

Contribution

- Designing and developing a Business Process Management solution, to manage their customer's call (Agent Desktop) business processes using IBM WebSphere's Business Process Management Suite.
- Implemented common components like DynaCache which will maintain InMemory data.
- Designed and developed BPM & ESB Pattern.
- Involved in resolving Data Power related issues.
- Involved in environment setup QA and PROD in Z-OS environment and resolved initial issues related to DB2 access and data source configuration.

Technology

WebSphere Process Server 6.1.2, WebSphere Enterprise Service Bus 6.1.2, WebSphere Application Server6.1, Synergy Version control, SOAP UI. This is based on Z-OS environment.

Delivery Project Lead (Jun 09 – May 10) ***American Airlines, Dallas, USA***

Project Description

The AACoRN is the Ticket Booking application which is used by the web Agents to book the air tickets for the customers. This application is used to check the availability of the flights between the given pair of city.

Contribution

- Design and development of components, designed an EJB based service implementation framework for Bluewater Service Implementation.
- Incorporating best practices like installing plug-in like checkstyle, codeFormatter at IDE level, introduced component which will help developers to test services from middle tier.
- Modules Integrations, Standards Adherence & Development estimation.
- Assisting team members for their technical clarification.

Technology

SOAP, WSDL, Mule Opensource ESB1.3, WebSphere Application Server 6.x, AccuRev & StarTeam version Control, JIRA Issue Management.

Delivery Project Lead (Dec 08 – May 09) ***American Airlines, Dallas, USA***

Project Description

Project Everest is Business Process Re-Engineering effort of American Airline's Cargo Division. Initiated in June 2005, Everest included Information Technology analysis of AA Cargo's existing systems. Based on the analysis, AA Cargo outlined the intent to migrate away from the Sabre Cargo application suite that is the heart of the 85-application portfolio.

Contribution

- Worked at client location as a technical Lead.
- Understand the requirement and design the WPS modules to accommodate the future changes. As a technical lead guide and help the team to know new features and limitation of the tool.
- Involved in iterative development.
- Involved in development along with resolving technical issues to the team members.
- Coordination with clients & taking care of deliverables.

Technology

WebSphere Process Server 6.1.2, WebSphere Enterprise Service Bus 6.1.2, WebSphere Application Server, JCA Resource Adapters

Team Lead (Dec 07 – Nov 08) ***Satyam Computer Services Ltd, India***

Project Description

The goal of the SFM is to enable the service fulfillment of standard IP-VPN and ISDN30 product lines through a process driven framework. The objective of SFM is to provide a SOA based assembly and integration of service components such as automated order workflow and manual tasks with relevant systems

Contribution

- Responsible for understanding requirement and goal of the service fulfillment framework which provide standard IP-VPN and ISDN30 product lines through a process driven framework.
- ISDN30 Process specifications Analysis
- Design and development of SFM Framework and Processes (PE/SE/NE)
- Process and Sub Process Development – Fiber/ILL/SinglePair/DualPair
- Common Dynamic UI Framework for managing human tasks
- Integrating Semantic Validation Framework and responsible for Integration Testing

Technology

Websphere Process Server, WebSphere Enterprise Service Bus 6.0.2, WebSphere Application Server 5.0, JCA Resource Adapters.

Team Lead (Nov 06 – Nov 07) ***TRW (Thompson Ramo Wooldridge), MI, USA***

Project Description

TRW is among the world's ten largest automotive suppliers and is one of the top financial performers in the industry. GIFCO system is a global instance of SAP for Finance and Controlling. GIFCO system aims to enable exchange of process-related information with local SAP/ QAD systems in a seamless manner using Sonic ESB and Sonic MQ as the SOA foundation tools.

Contribution

- SPOC for onshore-offshore development model
- Understanding the existing system and requirement gathering on integration point of view.
- Involved in Architecture design according to Sonic ESB.
- Preparation of canonical XML model as per automotive industry.
- ESB process creation and Canonical XML mapping for each transaction.
- XSLT transformation & Content Based Routing on Sonic ESB
- Error Handling Component implementation as per Sonic Architecture.

- Installation and configuration of iWay Adapter and Qxtend In/Out bound adapter configuration.
- Configure and maintain Subversion version control.
- Preparation of Test cases.

Technology

SOAP, WSDL, Sonic ESB 6.1, Sonic MQ 6.1, SAP ECC 6.0, iWay Adapter, Qxtend (Inbound & Outbound), QAD, XML Spy, Subversion

SOA / J2EE Developer (May 05 – Oct 06) ***Nissan Motor Manufacturing, Newcastle, UK***

Role and Responsibility

- Performed as a SOA / J2EE developer role over 20 months in several engagements with Nissan Motors – UK
- User requirements gathering & preparing system specifications for the B2B integration application
- Designing the application based on Web Service Framework
- Development of Mediator Sequence & integration with Mainframe application
- On-Site coordinator for the project
- Responsible for decoupling of Service layer and Presentation layer
- Developed Java bean to XML serialization to overcome the limitations of pre defined XML templates.

Developer (Sep 04 to Apr 05) ***GM – USA, Ford Motor – India, GlaxoSmithKline – US***

Role and Responsibility

As a developer involved in below tasks in different customer engagements

- Involved in service consumer implementation that validate the customer address and product tax calculation in on line purchase module.
- Understanding user requirements & system specifications
- Designing and preparing detail design
- Implementing broadcast on web module & FTP Server access module
- Fail over component implementation using JMS
- Implemented Web Service interface for GSK & Implemented Web Service Client for PSH

Developer (Apr 04 – Sep 04) ***T. Rowe Price (TRP), USA***

Role and Responsibility

- This is a migration project where all application developed in WAS 4.0 (J2EE 1.2) are migrated to WAS 5.0 (with J2EE 1.3 complaint). All the new J2EE1.3 methods are replace the deprecated methods.
- Migrated more than 10 modules and fixed the all the errors during migration activities

Developer (Jun-03 to Apr-04) ***NewCo - Life Insurance, USA***

Role and Responsibility

- Design and Development of applications using J2EE technologies like Servlet and JSPs.
- Development of web module using java script, XML, XSL and HTML
- Preparation of technical design document

Technical Skills

Languages	Java
Databases	Oracle 8i, MS SQL Server 2000
Web Related	HTML, JSP, Servlet, JavaScript
Tools & Utilities	Web Logic workshop 8.1, Workspace Studio 1.1, WSAD 5.1, for SAP, Eclipes2.1, UML, Visio, JBuilder
Application Servers	IBM Websphere 6.1, Apache Tomcat, BEA Weblogic 7.1
Frameworks	Struts1.1
SOA Toolset	IBM BPM Lombardi suite 7.5, IBM Integration Designer 7.5, IBM Websphere Process Server 7.0, WID 7.0, IBM Websphere Business Monitor, IBM Business Space 7.0, AquaLogic Service Bus 2.6, AquaLogic Data Service 3, EntireX Mediator & Communicator, Sonic ESB 6.1, Sonic MQ6.1, iWay Adapter, iTKO LISA
SOA Governance	Tamino UDDI, Progress Actional Suite
Web services	SOAP, WSDL, AXIS1.2, JAX-RPC, SAAJ, JMS
Web 2.0/ XML Technologies	XML, XQuery, XSLT, DOM, XML Schema, SAX and AJAX
Operating Systems	Windows, Solaris & Z-OS
Source Control Tools	Win CVS, Microsoft Visual Source Safe, AccuRev, StatTeam & IBM Synergy.

Training Skills

Sl#	**Title**	**Duration**
1	Mentored WPS/WESB for 50 members	2 weeks
2	Mentored Sonic ESB & Actional Tools for 5 members	1 weeks
3	IBM Websphere Technical Conference – 2010	3 Days

Education Summary

- ***Master of Computer Applications***
- ***Bachelor of Science – Computer Science***
