Master.Ajay@Aol.Com

SPECIFIC EXPERTISE

- 9 Years of strong experience in **design, development and implementation** of business applications using Object Oriented Programming.
- Experience with the entire Software Development Life Cycle (**SDLC**) including System Analysis, Design, Development, implementation, testing and maintenance of software applications.
- Expertise in **designing, developing multi-tier applications using J2EE** (**Servlets, JSP**, Custom tags, Struts, **Spring**, **JDBC**, **Hibernate**, EJB, RMI, JNDI) technology and Rational Rose.
- Experience with **JAVA**, Eclipse, **SQL**, J2EE, JDBC.
- Good understanding of Distributed Enterprise applications and **Web Technologies with Multi-Tierarchitecture** involving **GUI**, ObjectOrientedDesign and RDBMS.
- Excellent in databases like Oracle 10i/9i/8i, SQL Server and MYSQL.
- Strong knowledge in Object Oriented Concepts, Object Oriented Design (OOD), Object Oriented Analysis (OOA), Programming and its implementation.
- Expertise in Application development using various frameworks such as **Jakarta Struts Framework 1.2/1.3, Java Server Faces, Spring Framework 1.2/1.3/2.0, Spring MVC, Hibernate 2.0 ORM** withGUI plug-ins like **Tiles Framework**, validation plug-ins like **Validator Framework.**
- Experience in implementing J2EE design patterns: Business Delegate, Session Façade, Service Locator, Factory, DAO, Transfer Object, Singleton and Model View Controller.
- Experience in developing applications using IDE's Eclipse, IBM Rational Application Developer (RAD), IBM WebSphere Studio Application Developer (WSAD 5.1) and Jbuilder.
- Experience working with JAXB and XML Schema for web services.
- Solid understanding of ILOG 7.1x architecture including: Batch scheduling, Monitoring, Reporting
- Implement batchjobs and Unix shell scripts to support critical enterprise functionality.
- Experience in writing Rules, using Decision Manager and RMS.
- Experience in Creating Web Services and WSDL using event source and services pallets.
- Experience in TIBCO BE (Concept, Events, Complex Events, Rules…..)
- Experience with Version Controlling tools like PVCS, Subversion and Rational ClearCase.

- Experience in working on Websphere Application server, BEA WebLogic Application server, JBoss Application Server and Apache Tomcat.
- Involved in getting the Functional/Business Requirements from the Client/Analysts and preparing Application Design Documents (ADD) using UML.
- Experience with JUnit in performing unit test and LOG4J in debugging the application functionality.
- Quick learner with an ability to rapidly achieve organizational integration.
- Ability to work well in internal and cross-organizational Team environment.
- Strong Skills in Analytical, Data Gathering, Analyzing, Problem Solving, Coordinating, Planning and Organizing.

Technical Skills:

Design and Modeling	UML and Design Patterns
J2EE Suite	Servlets, JSP, JSTL, EJB, RMI, JNDI, Java Beans, JDBC
MVC Frameworks	Struts, **Spring Framework**
Languages	**Java**, XML, XSLT, HTML, Java Script, C Shell, **SQL**, PL/SQL
Tools	ANT, Junit, LOG4J, Rational XDE, ClearQuest, Test Director, TOAD, IBM WODM 8.0, ILOG Jrules, JBOSS Drools, TIBCO
O/R Mapping	**Hibernate**, HQL
IDE	RAD 6.1, WSAD 5.1/5.0, Eclipse 3.5, XML Spy, Rational Architect
Version Controls	ClearCase, ClearQuest, PVCS, Subversion, CVS
Servers	IBM WebSphere Application Server 5.1/5.0, BEA Weblogic Server,Jboss Application Server, Apache Tomcat
RDBMS	Oracle 10i/9i/8i,DB2 UDB 8.1,MySQL,SQLServer, MSAccess, Sybase
Operating Systems	Windows XP/NT/2000/98, UNIX

EDUCATION:
MASTERS IN INFORMATION SYSTEMS, 2004, OSMANIA UNIVERSITY
BACHELORES IN COMPUTER APPLICATIONS, 2002, OSMANIA UNIVERSITY

CERTIFICATION:ORACLE WEBLOGIC SERVER 10G SYSTEM ADMIN CERTIFIED EXPERT
EXPERIENCE SUMMARY

1) ***EMPLOYER :*** **Zen Infotech LLC Pvt LTD**

Duration : November 07, 2011 - PRESENT
Projects:

Client: WellsFargo
Role : APPLICATION SYSTEMS Architect
Project : Secondary Marketing Systems (SMS) / Asset Sales and Delivery Systems (ASDS)
Duration : April 2013 – March 2014

SECONDARY MARKETING SYSTEM (SMS) is an in-house developed client server application. Information is received from LPS and LIS, as well as sent to various internal external systems.

The application contains conforming and non-conforming loans that have been closed and funded. The primary responsibility of SMS is to create and deliver loan sales for the Agencies and Investors.

- SMS users use the SMS application to invoke (run) specific exports for the purpose of sending loan /pool data to Freddie Mac and Fannie Mae
- Freddie MAC (FHLMC)-MIDANET exports
    i) Required Transmission from SMS to update MIDANET with delivery information for pool/loan transmittal to Freddie Mac
- Fannie Mae(FNMA)-MORNET exports
    i) Required Transmission from SMS to update MORNET with delivery information for pool/loan transmittal to Fannie Mae

Responsibilities :

- Develop services to integrate data between rules management application and rules engine.
- Experience in designing, developing, and modifying applications using SOA architecture, J2EE, Spring, Spring MVC, Hibernate, Struts, Oracle 10g, ANT, and Maven.
- Assisted in planning, installation and execution of new JRules ILOG server, application server and Team server.
- Developed designs and strategies for business rules and address problems including configuration of ILOG Rules.
- Integration with WPS using Queues/MDB and IlrRuleExecutionBean
- design and authoring of rules with rule developer,generation and customization of rule reports, deployment of rules to RES and WODM tools like Rule Studio, RTS, RES, RSO, DVS.
- Implemented procedures for designing, coding and testing of application code through ILOG JRules.
- Maintained detailed technical documentation relating to development assignments using ILOG JRules.
- Experience integrating applications and designing and developing web services and frameworks. Successful track record in designing and implementing highly-complex code where performance is critical.
- Demonstrated ability to think strategically and realize those strategies in application design.
- Experience working collaboratively with other technology teams to reach common goal.
- Experience diagnosing critical problems and develop solutions to correct them.
- Develop and Implement/Debug Rules based on JBoss Drools Language for UC34

Environment : Java 1.6, J2EE 6, Oracle, Websphere, WODM 8.0, JBOSS Drools, SQL Developer, Subversion-SVN, Tortoise SVN, Eclipse Helios 4.6.2, WINscp, Putty, Rule Studio, RTS, RES, RSO, DVS.

Client: Benecard PBF – Orlando, FL
Role : Technical Lead/Analyst

Project: RxALLY – Medicaid Therapy Management

Project Description:
Medication Therapy Management (MTM) Program

Benecard PBF Medication Therapy Management (MTM) program was developed and managed by licensed practicing pharmacists and physicians intended to provide relevant health information and support to beneficiaries and optimize therapeutic outcomes through improved medication use for targeted individuals. This program is required by Medicare to be provided to all beneficiaries with an opt-out method of enrollment and is designed to reduce undesirable events such as drug interactions and adverse drug events as well as improve medication use to promote the health and well-being of the enrollees. This Program will distinguish between beneficiaries in both ambulatory and institutional settings.

Reponsibilities

- Design and Development of UI Screens using Prime faces, JavaScript, CSS.
- Preparation of Business requirement documents
- Execution and Writing Test cases
- Design of Business flow using Eclipse based – ILOG Rule Designer
- Development of Eligibility Rules to determines Member Eligibility
- Usage of logging and JUnit 4 for testing purposes
- Assisted in implementation and support of development standards according to BRMS practices.
- Coordinated with business units for understanding and documentation of business requirements.
- Developed methods and techniques to implement solutions as defined by development methodology.
- Prepared project plans for all assigned projects to understand and fulfill business needs.
- Implemented procedures for defining test cases to ensure quality assurance of overall enterprise applications.
- Maven and Jenkins for Build and deployment purposes
- Test cases for validation of rules and Meeting Functional Requirements of application
- Involved in getting the Functional/Business Requirements from the Client/Analysts and preparing Application Design Documents (ADD) using UML.
- Integration, Simulation and performance optimization activities using WODM/Rule Studio/RES tools.

Environment:
Java 1.6, J2EE 5, WAS 7.0, JSF 2, Primefaces, EJB, Spring, MyBatis, DB2 (z/os), IBM WODM 8.0, ILOG Jrules, Decision Validation Services, Scenario Services Provider, IBM Rule Designer, Tortoise SVN, IBM Datastudio, UML

Client: Department of Transportation-Madison, WI
Role : Team Lead
Project: CARS

Project Description: CARS (Contractors Auditing and Reporting System) is a State wide Project intranet application for different kinds of users, including external Vendors. The CARS application is a web based application consisting of hibernate, struts actions, tiles, tags and JSPs under WAS6. The application is in Subversion (trunk level) and will be checked out into My Eclipse Blue for the upgrades and enhancements. As the first step, the application is restructured as a 'maven' application.

Responsibilities

- Responsible for creating the Detailed Design and Technical documents based on the requirements given.
- Developed **MVC** design pattern based **User Interface using JSP, XMI, Java Scripts, HTML** and Struts.
- Used **Custom Tags, CSS, JQuery, JavaScript, XMI** for client side implementation
- Used Struts validator framework to validate user input.
- Developed code to consume web services to validate addresses.
- Integrated **Struts** and **Hibernate** with DAO.
- **Hibernate** is used as a persistence mapping technology along with JPA which acts as a wrapper around the Hibernate eliminating the mappings and configuration by annotating the POJO classes with Data Base tables.
- **Wrote complex SQL queries**, PL/SQL Stored Procedures for all the DML process.
- **Junit**, **log4j** were used for unit testing and as logging frameworks.
- Involved in coding of Java classes, JSP, Servlets and Struts action classes.
- Application is built using standard design patterns such as DAO, Abstract Factory, Singleton, Business Delegate and MVC.
- Collaborated with users, database administrators, and team members involved in the project implementation.

Environment: Java 1.6, JSP, Struts, Servlets, JDBC, **Hibernate**, **Spring**, Oracle 10g, Maven, HTML, CSS, JavaScript,ANT, XMI, Websphere 6.0, MyEclipse 5.5, Log4j, SVN, Windows 7, UNIX.

2) *Employer :* **IBM India Pvt LTD**
Duration : October 13, 2008 to December 13, 2011

Projects

Client: New York Life Insurance- Sleepy Hollow, NY
Role : Sr. J2EE Developer
Project: ECPS, RTS, CTS

Project Description: The Enhanced Compliance Profile System (ECPS) is an intranet based application that serves as a data warehouse for New York Life Agents. ECPS includes all Active Agents along with any Agents who are terminated and have had a compliance exception in the last five years..

Responsibilities

- Responsible for creating the Detailed Design and Technical documents based on the requirements given.
- **Developed the application using with Java technologies** like JSP, Servlets, Struts, **Hibernate**, Java Beans, XML, JAXB.
- Worked with **Struts 2 framework** - creating Action classes and coding JSP's using Struts 2 tags for the presentation layer.
- Developed **MVC** design pattern based User Interface using **JSP, XML, HTML and Struts**.
- Used Struts validator framework to validate user input.
- Integrated **Spring** and **Hibernate** with DAO.
- Created XML files for storing the data required for module.
- ImplementedJAXB and a subset of XML Schema for web services.
- **Wrote complex SQL queries**, PL/SQL Stored Procedures for data conversion and also for bringing legacy data (POW) into the current database (POW_Tran).
- Junit, log4j were used for unit testing and as logging frameworks.
- Involved in developing JUNIT Test Cases to validate the type of data in the XML Files.
- Created and implement batchjobs and Unix shell scripts to support critical enterprise functionality.
- Application is built **using standard design patterns** such as DAO, Abstract Factory, Singleton, Business Delegate and **MVC**.
- Clearquest for tracking the tasks and Clearcase for version control.
- **Collaborated with users, database administrators, and team members** involved in the project implementation.

Environment:Java 1.5, J2EE, Struts 2.x, **Spring**, **Hibernate**, JSP, HTML, XML,ANT, JAXB, Sybase WebLogic Application Server, IBM Rational Tools (Clearcase, Clearquest), JUnit.

Client: American Express- Fort Lauderdale, FL
Role: Architect/ Offshore – Onshore Coordinator/Team Lead

Project: New Accounts Servicing Portal

June '10 – Till Date

Project Description: Worked on the New Accounts Application Processing (NASP) Applications. New Account Servicing Portal (NASP) is the Graphical User Interface (GUI) used by New Account Customer Care Professionals (CCP's) to facilitate application processing and decision for all US Consumer and OPEN Charge and Lending card products

As part of the mandatory Dialer Uplift Program, World Service New Accounts has identified NASP as a front-end solution to replace the existing front end service processes, i.e., screen scraping and GNA green screens. NASP Dialer will be deployed in order to secure continued connectivity with the Aspect outbound Dialer.

Responsibilities

- Involved in gathering requirements, developing Use Case Model, Analysis Model, Component Model, Class Diagram using Enterprise Architect.
- **DevelopedGUI** for different modules using **HTML**, **DHTML**, **JSP, XML** and **Struts.**
- Implemented the project using **Jakarta Struts1.2 Framework.**
- Extensively used **Eclipse 3.5** for writing code for the USD Support Tool.
- **Used standard design patterns** such as DAO, MVC, and Singleton.
- **Wrote complexSQL queries** for data conversion and also for bringing legacy data into the current database.
- **Hibernate** is used as a persistence mapping technology along with JPA which acts as a wrapper around the **Hibernate** eliminating the mappings and configuration by annotating the POJO classes with Database tables.
- Worked on documentation of interface details and the detailed design of the project.
- Involved in sprint daily standup meeting throughout the process of design and development.
- Involved in **Unit Testing**, **User Acceptance Testing** and **Bug Fixing**.
- Performed random and regress testing of the application for reducing number of defects.
- Developed and deployed using RAD / WebSphere Application Server (WAS).

Environment:Java, J2EE, Struts, **Hibernate** JSP, Unix, AJAX, HTML, WebSphere, Oracle 9i, Log4J, Eclipse3.5, TOAD, JUnit, Subversion, Axis, WSDL, Web Services, Introscope.

Client: Panasonic
Role: Senior Systems Engineer
Project: B2C / B2B Web

Project Description: PNA is in the business of selling of various types of consumer electronic products such as Television, Camera, Computer accessories etc. Information related to these products is stored in the Product Catalog. The B2C Company Store application enables

customers to buy products displayed on the Product Catalog by enabling the customer to add a product to the shopping cart, provide shipping and billing address, calculate shipping cost, provide payment details and confirm the order.

Responsibilities:

- Application developed in **MVCarchitecture** using **Struts 1.2**, **spring framework 2.0, Hibernate 3.0**, **AJAX, JSPs**.
- Dynamic output has been generated by **usingAJAX.**
- **Developed theUI** using the **JSP, JSTL, CSS, HTML, DHTML, Struts** and **Servlets.**
- **Design patterns** (Singleton, Abstract Factory, Value Object, and Business Delegate) have been followed to make application robust.
- Monitoring, Administrating WebSphereCommerce Server 6.0
- Creating URL Re – directs
- Building and Deploying applications on various environments through Quickbuild.
- Used Tivoli Performance viewer to monitor the performance of CPUs
- Monitoring the MQ and Commerce jobs, monitoring the heap sizes in the WebSphere Commerce Cluster.

Environment: **J2EE**, **Spring** 2.0, **Hibernate** 3.0, AJAX, EJB, IText 2.0.5, Struts 1.2, Web Services, JSP, JMS, WSDL, XML, XSL, JSTL, CSS, XHTML, XPATH, JNDI, WebLogic Server, Oracle 9i, log4j, MySql, AIX, LDAP, TOAD.

3) *Employer:* KPIT Cummins Global Business Solutions Ltd
Duration : October 30, 2007 to September 12, 2008

Client: Oracle BEA Systems- SFO, CA
Role: Sr. Developer Relations Engineer/SME
Project: BEA Weblogic Server Support

Project Description
The Project objective is - Handle all incoming issues of different J2EE applications (based on Struts, EJB, and JMS) on all versions of Weblogic. Replicate the test Cases related to different issues like Clustering, JVM, JDBC JMS, EJB sent by the Customer in Weblogic in different environments and Technologies.I was person to handle the Services Request in Oracle Weblogic support specifically for webservices and Workshop based issues along with WebLogic Admin related issues.

Basically I handle all type of the Services Request based on J2EE and Core Weblogic.

Under this project we will be doing all the reverse engineering process by analyzing the issues with various issues we directly communicate the End client through phone and mail if possible we try to figure out the issue doing web-meeting.

Responsibilities

- Worked with business analysts in gathering the requirements.

- Analyzed and prepared requirement documents and provided recommended design, created detailed project outlines and application design specifications.
- Involved in **high-level design of the modules** and writing technical specification document.
- **Developed the prototype** of the application in **HTML/DHTML, CSS** and **JavaScript.**
- **UI development involved codingJSP**s and **framework components.**
- Responsible for configuring deployment environment to handle the application using TOMCAT server and Oracle 9i at the back-end.
- Extensively used **Struts** validation framework.
- Used TIBCO Administrator to perform administration, configuration management, and production support of TIBCOinfrastructure and components.
- Worked with xml files like web.xml, struts-config.xml, validator-rules.xml, validation.xml for mapping and defining validation rules.
- Extensively used/created XMLdata documents for transferring data among different applications.
- **Build, deployed and tested application** using ANT 1.5 scripts.

Environment: **J2EE, Java**,Weblogic Server 8.x, 9.x, 10.x, Workshop,XML, Web Services,HTML, JSP, JavaScript,**TIBCO** EMS 6.0, JDBC, EJB, JQuery, Oracle 9i, Tomcat, Eclipse,Rational Rose, TOMCAT, Struts 1.2, JNDI, CVS, CSS, Windows 2000.

---

4) ***Employer :*****Sopra India Pvt LTD**
Duration – 5th February 2007 to 29th October 2007

Organization: National Health Services (NHS)- Scotland
Role: Senior Systems Engineer
Project : Scottish Drug Misuse Database (SDMD)-SMR2
Scottish Government's unit National Health Services needs to keep track of all the drug addicts and their information in the Database and the information would be populated using certain standards that are already in place and this project helps them to conform to the new methodology and practices that are set. The purpose of this project is to develop a Scottish Drugs Misuse (SDMD) - Follow Up Reporting System that collects information

Responsibilities:
• Development and testing of various business interfaces.
• Involved coding and review of the system
• Prepare the relevant Design documents as per the requirement.
• Coordinate and interact with other development, testing, and infrastructure teams/ groups.
• Interact with analysis teams (authors of business and functional requirements).
• Working with in-house Code Generator for development to provide inputs for Maven Dependencies as well as the Architecture to be generated.

Environment:
Spring Framework, Hibernate Framework, Business Objects XId, Oracle Application Server, JDeveloper, Oracle Application Development Framework(ADF), Oracle Virtual

Private Database (VPD), Microsoft VSS, WinCVS, Business Intelligence Reporting Tool[BIRT] for eclipse.

5) Employer : **GGI Infotech PVT LTD**
Duration : October 2004 to February 2007

Liberty Life Insurance, Hyderabad, India
Role: Software Engineer
Client: Royal Bank of Canada - RBC

Responsibilities

- Developed different JAVA and SQL applications based on client requirements
- Calculated risk of customer based on geographic location and type of customer
- Developed International Money transfer application by using WSDL and SOAP
- Implemented SOAP and REST full web services
- Developed issue and bug tracking tools
- Tested developed applications using J Unit, Load Runner

Environment: Java in **Eclipse, JSP, Servlets**, JDBC, MAVEN, SQL, Tomcat and Oracle App Server

---
