

Vivian Richard

Bridgewater, NJ, (H) 732-930-0630, Email :- VivianRichard@gmail.com

Profile:- Vivi is a Pegasystems professional with more than 6 years of industry experience in software architecture, design and development including PEGA BPM, CMS, B2B, B2C, and ERP. Vivi has more than three years of experience in PEGA PRPC including designing, configuring, implementing, testing & debugging PRPC applications. Vivi is experienced in using PRPC DCO tools - **Application Profiler, Application Accelerator** and **Application Express**. Expertise in Class Structure Design and ECS Layers. Experienced in designing **Workflows, Flow Actions, User Interfaces, Activities, Decision Rules, Declare Pages** and **Agents**. Used PRPC debugging tools viz. pre-flight, **PLA, PAL** and **SMA**. Expertise in creating **Services** and **Connectors**, creating **Reports**, Application Deployment using R-A-P files and Ruleset Management.

PEGA Certified Senior System Architect (CSSA), Consultant to a Product Company, HealthCare Vertical, Jan 2011 – Current. Project Description: Hospital Management System

The Health Management System is rules based PEGA Business Process Management (BPM) product that allows business users to develop and manage innovative healthcare products, supporting product design, approval, operational readiness and execution. HMS provides a product repository designed for Hospital cross enterprise use. HMS provides business users the ability to define a library of rules that can be applied at any level within the product hierarchy.

Responsibilities and Contribution:

- Analyze the current HMS application structure and build the product structure in HMS.
- Evaluate the design and build the Class and Ruleset structure
- Identify Security and Roles for Account Management.
- Design and deliver the individual WorkList Renaming and Reset solution.
- Developed the most complex components of the WorkList Reset Application by writing activities, integrating PRPC with multiple databases and designing the UI
- Used UI : Harness, Flow Actions, Sections, Dynamic Selects, Smart Info, Grid Layout
- Set up different Access Groups, Roles and Privileges for the HMS system.
- Customized Framework Activities and Flows to handle integration errors.
- Assisted with migration activities using R-A-P files.
- Implementation and integration of multiple external systems with soap connectors.
- Designing the SQL connectors to get data from the external databases.

- Involved in Creation of validation rules to implement business logic validation.
- Used RDB-List, RDB-Open, RDB-Save depending on the business rules
- Integration testing of the application and debugging using tracer and rules inspector.
- Identify new design alternatives in the target PRPC version that will remediate current issues and improve performance.
- Assess the application overall for Pegasystems Guardrails best-practice compliance.
- Document high level activities and integration scenarios that need to be performed.
- Identify the consuming applications interaction for product definitions and build PEGA applications to support it.
- Define and build the product attributes and implement iterative feedback to refine the product structure.
- Document integration abilities, analyze and discuss possible integration scenarios.
- Provided thought leadership on design solutions for future and ongoing application development.
- Determine quantitative/qualitative benefits that can be achieved by implementing the proposed solutions.

Java/J2EE Developer, DSTE Systems - Aug 2006 - Dec 2010

Part of the team involved in the design, enhancement, development, and deployment of a Billing Engine at DST Systems. The BCS Billing Engine is an in house custom built application that generates Invoices based on billable charges and postal charges accrued through vendors who provide DST services on outsourced business processes.

Environment: Java, J2EE, Servlets, Websphere, AIX, UNIX, C, PRO*C, Shell Scripts, Oracle SQL/PLSQL, Oracle Financials.

- Design the business logic according to Java Object Oriented Analysis and Design principles
- Design Java class diagrams and interfaces in MVC Struts.
- Used JSTL, Struts and Custom tags for Java Struts Development.
- Design and develop and maintain an asynchronous, AJAX based rich client.
- Development of web services for communicating with disparate software systems.
- Development and Deployment of Servlets and JSPs to serve Billing Management.
- Development of Servlet and JSPs to communicate with back end systems.
- Provided architecture for storing claims in XML formats that can be easily retrieved and searched for contents.
- Involved in working with end users in gathering, developing & refining requirements
- Liaison between Business team, Product team and Operations
- Involved in managing workflow and process
- Work with Database team to define db indexes for reports and master lookup tables
- Write SQL queries for quick workarounds, problem research for production support.

- Fine Tune SQL to increase reports runtime efficiency.
- Write shell scripts and sql scripts to assist testing.
- Identify tasks and provide LOE (Level of Effort) to project manager.
- Used Eclipse as IDE for development of the websites

Education

PRPC Certified Senior System Architect

MCA (Master of Computer Applications), Coimbatore Institute of Technology, Aug 03 – May 06
