605-215-1091

Pega Senior System Architect

SUMMARY:

- Around 7+ years of experience in the IT Industry and 5+ years of experience in the Analysis, Design, Development, Deployment and Maintenance of BPM and BRE applications using the Pega Rules Process Commander (PRPC 5.x/6.x) tool.
- Expertise in working with solution frameworks like CPM, CPM HC, SmartBPM, which represent various business verticals.
- Good knowledge of organizational hierarchy and hence involved in requirement gathering along with business analysts to better understand end user requirements and various scenarios.
- Expertise in developing and managing Workflows, Class structures design, developing User Interface (UI), creating various Flow actions, interpreting Tickets, complex flow shapes for business scenarios, Activities, activity step methods, Decision maps and Decision rules.
- Excellent understanding of various types of Rules like Product rules, Correspondence rules, Integration rules and Ruleset management, and associated tools such as export & import tools.
- Excellent knowledge on using debugging and performance tools like Clipboard, Tracer, Performance Analyzer (PAL) and System Management Application (SMA).
- Hands on 3 yrs of experience in Java2EE, EJBs, Servlets, JSP.
- Excellent real-time knowledge on AGILE and SCRUM methodologies, Object Oriented Programming (OOP), Relational Database (RDBMS) and Service Oriented Architecture (SOA), CRM.
- Excellent knowledge of developing Rich UI, CSS, Skins, Screen Layouts using JSP's, HTML and AJAX.

TECHNICAL SKILLS:

Smart BPM Suite:	Pega Rules Process Commander (PRPC) 5.x, 6.x
Application/Web Servers:	Tomcat4.1/5.0, WebLogic 8.0/9.2, Websphere 6.0.
Programming Languages:	JAVA2EE, C++, C#/VB.NET
J2EE Technologies:	EJB2.0, Servlets, JSP, JDBC2.0, JSTL, JMS, JNDI
Frameworks:	Jakarta Struts, spring, Hibernate.
Markup Scripting Languages:	SOAP, JSP, XML, XSL, HTML, CSS
User Interface:	Adobe Photoshop/ Flex
RDBMS:	Oracle 8i/9i/10g, DB2, SQL Server 20005/2008.
Business Verticals:	Banking, Insurance, Healthcare, Sales/Retail Industry.
Operating Systems:	Windows 98/NT/2000/2003/XP, UNIX.

Certifications:

Pegasystems Certified PRPC Senior System Architect (V6.2)
Pegasystems Certified PRPC System Architect (V6.1)
Pegasystems Certified PRPC Business Architect (V6.1)

WORK EXPERIENCE:

Zurich Insurance Schaumburg, IL **Nov 2013-Present**

Pega Systems Consultant

Pega Senior System Architect

Responsibilities:

- Installed the PRPC version 6.3 and solution framework Pega Insurance into the PRPC, which involved contribution from various teams such as Database and System Administration.
- Involved in business requirement gathering along with the business analyst for the application UW Work Flow Management application.
- Developed new portal layouts which served new roles in the organization, in addition to the pre-packaged layouts.
- Involved in enabling security and access control to the application by creating different levels of access to various business users and developers i.e access groups, work groups, access roles.
- Developed the code in branch rule versions which helps in parallel development in multiple teams.
- Designed and developed high level class structure in PRPC like class groups, work classes based on the organizational hierarchy.
- Designed and implemented user interfaces using Sections, Harness and HTML stream rules.
- Created specialized rulesets which served as containers for specific rule types.
- Used Clipboard and tracer tools to navigate through flows along with the work objects and trace the results.
- Performed integration by developing rules pertained to rule-connect and rule-service. Major tasks involved integrating with SQL databases to fetch data and with SOAP/Webservices to review particular data.
- Developed Correspondence rules to intimate the customers about their account balance, any disputes, offers available status through email or fax messages.
- Developed product rules to migrate data instances and rulesets from development to User Acceptance Testing & Performance environment when needed.
- Involved in List and Summary view reports and documentation
- Migrated the code into most recent version of PRCP Pega 7.

HMSA (Blue Cross Blue Shield of Hawaii), Honolulu, HI **Apr 2013 – Oct 2013**

Pega Senior System Architect

Responsibilities:

- Installed the PRPC BRE and BPM tool and solution framework Smart Adjust into the PRPC, which involved contribution from various teams such as Database and System Administration.
- Designed and developed high level class structure in PRPC and concrete classes to act like bridge between CPM HC and PRPC application.
- Developed new portal layouts which served new roles in the organization, in addition to the pre-packaged layouts.
- Created Activities to accept CPM HC work object references and return Non-CPM work object references and modifying them to invoke the new activities.
- Developed CPM HC IAV,Interaction Driver rules,Portals, composite tabs for customer 360 info

and navigation rules.

- Developed Case management in resolving interaction cases and intent/Work Object cases.
- Designed and developed high level class structure in PRPC like class groups, work classes based on the organizational hierarchy.
- Involved in business requirement gathering along with the Business Analyst.
- Involved in enabling security and access control to the application by creating different levels of access to various business users and developers i.e access groups, work groups, access roles.
- Created specialized rulesets which served as containers for specific rule types.
- Implemented the pre-packaged workflows that come with the framework and customized them to support successful payments processing and handle payments exceptions.
- Created various flow-actions for successful exceptions management.
- Used Clipboard and tracer tools to navigate through flows along with the work objects and trace the results.
- Used HCIF and CMF frameworks in processing bilings, claims, enrollment and membership as part of CR project.
- Followed Agile methodology in delivering the Project tasks in this implementation.
- Performed integration by developing rules pertained to rule-connect and rule-service. Major tasks involved integrating with Oracle databases to fetch data and with SOAP/Webservices to review particular data.
- Designed and implemented user interfaces using Sections, Harness and HTML stream rules.
- Implemented various PRPC components like Decision tables, Decision Maps, Indexes.
- Developed Correspondence rules to intimate the customers about their account balance, any disputes, offers available status through email or fax messages.
- Developed product rules to migrate data instances and rulesets from development to User Acceptance Testing & Performance environment when needed.
- Involved in List and Summary view reports and documentation.
- Developed and executed test scripts for different stages of deployment like unit testing, functional testing and smoke testing.

Environment: Pega PRPC 6.1, Oracle 10g, WebLogic Server 9.2, Microsoft Visio 2003, Windows XP, Web Services, TCPMon, XML spy.

MasterCard, O'Fallon, MO **Sep 2012 – Mar 2013**
Pega Senior System Architect

Payment Processing Description: Implemented PRPC tool for intelligent automation of Payments Processing and resolve payments exceptions. The project includes major solution frameworks like SmartBPM and Smart Adjust. While Smart Adjust provided opportunity to automate the decision-making and work processing involved in error and exception management that occur during processing cycle, with SmartBPM we uniquely integrate business rules and policies. Our project was to include these two frameworks as the backbone for the application and develop new business rules and classes and apply security to it.

Responsibilities:

- Involved in the design of class Structure, Properties, Activities and Service rules
- Involved in integration to Filenet SOAP service to fetch the claims records.
- Developed Flows and activities.
- Reviewed the technical document and supported development to achieve their goals.
- Modified technical design documents and requirements documents after final review.
- Actively involved in the User Interface design and coding.
- Creation of Declarative expressions for a value change on the properties.
- Creation of validation rules to implement business logic validation.
- Implementation of decision tables, Decision Maps and Declarative expressions.
- Creation of activities and steps for implementing core business logic.
- Testing and debugging using tracer and DB trace.
- Handled a Project upgrading PRPC version from 5.5 to 6.2.
- Used CPM Card framework which has specific features as per business requiremenst in building workflows as part of BPMS Project.
- Deliverables were implemented in Agile methodology.
- Interacted with clients to understand the business requirements.
- Modified the existing portal layouts, depends on the User roles, Privileges.
- Implemented Service Level Agreement rules to send the correspondence to external users.

Environment: Java, J2EE, WebSphere 6.1, Pega PRPC 5.4SP1/5.4SP2, MQSeries, Web Services, XML, SOAP, AIX, Windows XP, Eclipse

Citibank, Sioux Falls, SD **Feb 2011 – Sep 2012**
Pega Senior Developer

Dispute Servicing Manager**:**
AP is responsible for managing current invoice, check request, and wire transfer workflow payment processes. The request document (paper document) is scannedonto a n/w sharing folder as an image with an agent running in the background. Depending upon the type of request the work object is created and is processed through the work flow. The project made use of a varied set of rules including declarative expressions, circumstance-qualified rules, service-soap, connect-soap, connect-sql, decision trees, decision tables etc.

Responsibilities:

- Involved in installing Pega PRPC tools, helped system administrator in sorting out major installation issues.
- Involved in developing authentication solution through SSO (single sign-on) using LDAP server, and to configure custom authentication activity and web.xml as well.
- Involved in requirement gathering and analyzing them with system architect.
- Involved in security design for successful access control by assigning various access roles, groups to various business users upon their level of rule-usage.
- Created Classes, rule sets and designed simple workflows and sub flows.
- Developed Property rules, HTML rules, Embedded Pages and used them in activities.
- Created agents which will run in the background to generate daily, weekly and monthly reports.
- Developed and designed workflows as well as integrating between systems for smooth and optimized operation of systems.
- All the iterative development lifecycles were followed in Agile methodology.
- Created Connect- and Service- rules to expose data to other systems through SOAP and web services by integration rules.
- Created stream and parse rules to generate XML stream flow into an external system and receive
- Implemented and deployed Java Messaging Services and Message Driven Beans to connect and communicate with external systems through internally auto-generated messages.
- CPM Card framework has been used in Card Disputes project in building claims work flows.
- Used Smart Adjust frame work in Pega Cards to automate the payment process and handle the dispute management work flows.
- Implementation of Decision tables, Decision Maps and Declarative expressions for validations.
- Developed technical requirements to provide end state requirements for line of business and development team.
- Led the upgrade version project in PRPC from 5.5 to 6.1 in Citicards application.
- Developed artifacts and workflows while following company standards and guidelines.
- Prepared Unit test cases and Unit test logs.
- Created the Connect rules and data-mapping to connect to the external RDB.
- Created list and summary view reports and provided access groups to enable security on them.

Environment: Pega PRPC 5.5, CPC HC Framework, Oracle 9i, Tomcat 4.1, Java, JSP, Windows 2000 professional, HTML, SOAPUI, XMLspy.

Aetna Corporation, IN **Feb 2008– Jan 2011**
Pega Developer

Enrollment processing application
Description: This project is an initiative tasked with reducing complexity, terminating inefficiencies, generating operational efficiencies with enhanced automation and improving speed to process the customer enrollment in the company. The major workflow includes various sub-flows, activities, and tickets to implement a technology-based solution for improving efficiencies in the Customer enrollment processing.

Responsibilities:

- Created various access groups and roles in order to solve business rules security issues. Also involved in security design through application server and work stations.
- Developed complete testing life cycle for enhancements including unit test cases and integration test cases.
- Involved in business requirement gathering and defining along with the business analyst.
- Performed CPM HC integration by creating specific rulesets and activities.
- Created variousflow-actions both general and specific to the organizational units.
- Developed and Implemented activities involving number of steps and methods for calling standard activites that come with the framework and the PRPC.
- Implemented fieldvalidations using declarativeexpressions and declareconstraints for known issues in the framework.
- Performed integration by developing rules pertained to rule-connect and rule-service.Major tasks involved integrating with SQLdatabases to fetch data and with SOAP/Webservices to review particular data.
- Created cross reference properties that will be generated by CPM HC and basic application.
- Used Clipboard and Tracer tools to navigate through flows along with the work objects and trace the results.
- Performed reporting using dashboard gadgets and tools and created Ad-hoc/custom reports using List-view and Summary-View rules.
- Performed correspondenceto intimate the customers about their offer status through email or fax messages.
- Involved in Change management aspects which include defining and implementing the procedures/technologies to deal with changes in business environment.

Environment: Pega PRPC 5.3/5.4, IBM DB2, Microsoft Visio 2003, SQL, Business Objects, Erwin, HTML, XML, and, Windows XP, JAVA.

Hewlett Packard, Banglore, INDIA **Sep 2006 – Jan 2008**
Java /Database Developer

Responsibilities:

- Worked with business users and clients during the requirements phase.
- Designed and developed user interface, Business Logic Tier and Data Access Tier.
- Developed Servlets, JSP pages, Beans and worked on Integration.
- Worked with AJAX and JavaScript while designing the Front End.
- Worked with DB (DBO) classes and used JDBC drivers from different vendors.
- Created user & database objects such as Tables, Views and Indexes, also worked on creating the stored procedures and Triggers.

- Designed and developed the MONITOR application which is used by the private wealth management Managers for keeping tracking of the various accounts.
- Used ANT Framework to build and deploy the application.
- Worked with JDBC for extracting data from the database.
- Perform Load Testing, Parallel Testing, String Testing, Unit Testing, Acceptance Testing and Defect Tracking using Test Director.

Environment: JSP ,Custom Tag Libraries ,JDBC, Java, HTML,SQL Server,Apache Tomcat , Apache ANT,Windows XP,Test Director, Oracle,Visio, Word, Excel, DB2, MS Project.

EDUCATION:

Bachelors of Technology in Electrical and Electronics Engineeringfrom Jawaharlal Technical University (JNTU), Hyderabad
